

C&BTR Fir Beaded Ceiling

C&BTR Fir Beaded Ceiling is milled from fiber that originates in the forests of the Pacific Northwest and British Columbia. It is fiber that has been prized for generations for its beauty, strength, and suitability for a wide variety of applications. Fir Beaded Ceiling is widely used where the finest appearance is required, such as patio and porch ceilings. Most pieces are entirely clear or have only a few minor eraser sized knots. C&BTR Fir Beaded Ceiling is kiln dried and milled to a tongue and groove edge & center bead pattern. Is available in nicely packaged 1200 board foot units, job pack quantities, and pulled to length.
